Workshop description:

This session is designed to give you the tools to maximise the opportunities an EASTBIO PhD offers and increase your employability on graduation by developing your transferable skill set. We'll discuss together what is involved in leading an event and how to sustain the network that you have formed with others from the EASTBIO cohort. We'll explore what leadership qualities you have and how to apply them. A case study of leadership will be exemplified.

By the end of the workshop you will have had the chance to explore:

1. Steps you should take to lead an event
2. How to take an active role among your peers.
3. The value of networks and building the EASTBIO community, including use of social media tools.
4. How to identify and develop your own leadership qualities.
